Summary

Computer Science student (2027) with a strong foundation in full stack development and a focus on building secure, scalable, user-facing software. Passionate about writing reliable code that solves meaningful problems for everyday users.

Achievements

- **2nd Place** — **FugenHack Hackathon** | Huristi — real-time hardware-level privacy monitor built in Python. *March 2026*

Education

ASIET Kalady, Ernakulam

Sept 2023 – May 2027

B.Tech in Computer Science Engineering

Skills

- **Languages:** Python, Java, C, JavaScript,
- **Frameworks:** React, Next.js
- **Backend/DB:** Node.js, Express.js, MongoDB, SQL
- **Tools:** Git, GitHub, VS Code, Linux
- **Core:** Full Stack Development, REST APIs

Experience

Software Development Intern | Zerone Consulting

June 2026 – July 2026

- Built and maintained full stack modules for a Clinic Management System from scratch using the MERN stack, contributing to both frontend and backend layers.
- Implemented a secure authentication module with role-based access control for clinic staff and administrators, ensuring scalable and reliable user management.

Projects

LangChain Multi-Agent Research Assistant

[GitHub](#) | 2026

- Built an automated multi-agent AI research pipeline using LangChain and OpenAI that autonomously researches topics across the web via Tavily search, drafts structured reports, and self-critiques output to produce a final polished document.
- Designed modular LCEL-based agent chains with Pydantic validation and async support, enabling reliable and scalable end-to-end research automation.

Civic Engagement Platform

[GitHub](#) | 2026

- Developed a full stack civic platform using the MERN stack that allows citizens to report and track public issues on an interactive map, with an admin dashboard for issue management.

Answer Evaluation System

[GitHub](#) | Feb 2026 – April 2026

- Engineered an end-to-end automated grading pipeline (FastAPI, Flutter, Gemini AI) to eliminate manual script evaluation, integrating EasyOCR and OpenCV for handwritten text extraction and semantic similarity scoring.

Huristi — Privacy-Focused Antivirus

[GitHub](#) | March 2026

- Engineered a kernel-level process monitor using `psutil` and `subprocess` to detect unauthorized camera/mic access in real time and auto-disable hardware drivers via OS-level calls.
- Awarded 2nd place at FugenHack hackathon out of competing teams.
